

ABSTRACT OF THE DISCLOSURE

A utility light includes a housing having a lens opening closed by a removable lens. Four fluorescent twin lamp assemblies mounted in the housing are separately switched in pairs to provide two levels of illumination. The housing is pivotally mounted on a stand for rotation about a first axis. The housing can be supported freestanding by the stand or attached to a support surface utilizing the stand. A hook mounted on the stand permits the housing and the stand to be rotated about a second axis.
